

🔑 GUIDE — DELETE BEFORE SENDING: HOW TO USE THIS TEMPLATE (5-10 yrs, Template B — GenAI-first framing). Use ONLY if you have real hands-on GenAI testing work — at your current job (even informally), freelance/POC, or substantial portfolio projects you can demo live. It positions you as a GenAI QA specialist with solid testing depth. If you'd be uncomfortable when an interviewer says 'walk me through your LLM evaluation work', use Template A instead. Amber boxes are guidance — delete all before sending. Replace every [bracketed placeholder].

YOUR NAME

GenAI QA Engineer — LLM Evaluation & AI Quality | RAG • RAGAS • DeepEval • LangSmith • Promptfoo • Python

Hyderabad, India | +91-XXXXXXXXXX | your.email@example.com | linkedin.com/in/yourprofile | github.com/yourhandle

PROFESSIONAL SUMMARY

GenAI Quality Engineer specializing in LLM and RAG application testing, built on [7]+ years of software test engineering. Evaluates AI systems using Human Evaluation, Automated Evaluation, and LLM-as-a-Judge; validates accuracy, relevance, groundedness, consistency, and completeness; and detects hallucinations, bias, toxicity, and grounding failures. Designs Golden, Regression, Edge-Case, and Adversarial datasets; measures Precision, Recall, Faithfulness, Context Relevance, and Safety; and automates evaluation workflows in Python wired into CI/CD.

🔑 GUIDE — DELETE BEFORE SENDING: SUMMARY: Deliberately mirrors the target JD's vocabulary — effective for ATS. Keep only claims you can defend with a story. Every line must survive the interview question: 'show me.'

GENAI & AI TESTING SKILLS

GenAI / LLM Testing: LLM Response Evaluation, RAG Testing, Hallucination Detection, Groundedness & Faithfulness Validation, Prompt Validation, Bias & Toxicity Testing

Evaluation Frameworks: RAGAS, DeepEval, Promptfoo, LangSmith, LLM-as-a-Judge, Human Evaluation Rubrics

AI Security Testing: Adversarial Testing, Prompt Injection, Jailbreak Testing, Red Teaming

Datasets & Metrics: Golden / Regression / Edge-Case / Adversarial Datasets; Precision, Recall, F1, Faithfulness, Answer & Context Relevance, Safety Metrics

Programming & Automation: Python (pytest), Prompt Engineering, Evaluation Pipelines in CI/CD (Jenkins / GitHub Actions)

Responsible AI: AI Governance, Compliance Validation, Enterprise AI Quality Standards

Testing Foundation: Test Strategy, Functional & Regression Testing, Defect Management, API Testing, SQL, JIRA, Agile — [7]+ years

GENAI TESTING EXPERIENCE & PROJECTS

GenAI QA Engineer (AI Quality Initiative) — [Company / Freelance / Independent]MMM YYYY – Present
[One line: what AI product/feature you evaluated — e.g., internal RAG knowledge assistant for support teams]

- Own end-to-end quality for an LLM-powered [chatbot/assistant]: evaluation strategy, dataset design, automated eval runs, and release sign-off against quality and safety thresholds.
- Built RAGAS + DeepEval pipelines measuring Faithfulness, Answer Relevance, Context Precision/Recall; wired into [Jenkins/GitHub Actions] so every prompt or model change is regression-gated.
- Designed Golden ([N] items), Regression, Edge-Case, and Adversarial datasets; ran prompt-injection and jailbreak suites in Promptfoo, closing [N] safety findings before release.

RAG Chatbot Evaluation Framework (Hands-on Project)

- Built an automated evaluation pipeline for a RAG-based Q&A chatbot using RAGAS and DeepEval, measuring Faithfulness, Answer Relevance, Context Precision, and Context Recall.
- Designed a 150+ question Golden Dataset with ground-truth answers; created Regression, Edge-Case, and Adversarial subsets for release-gating.
- Implemented LLM-as-a-Judge scoring with calibrated rubrics and validated judge reliability against human evaluation on a sample set.
- Detected and documented hallucination patterns (unsupported claims, fabricated citations) and reported groundedness gaps for prompt/RAG tuning.

Prompt Injection & Jailbreak Test Suite (Hands-on Project)

- Created an adversarial test suite in Promptfoo covering prompt injection, role-play jailbreaks, encoding attacks, and system-prompt leakage scenarios.
- Automated safety regression runs in CI/CD so every prompt or model change is gated on safety and quality thresholds.
- Tracked evaluation runs, traces, and failures in LangSmith for debugging and reporting.

📌 GUIDE — DELETE BEFORE SENDING: EXPERIENCE/PROJECTS: The first entry frames real GenAI work you've done — inside your current QA role counts if you actually did it ('AI Quality Initiative' is an honest title for that). If you have NO such work, switch to Template A and build the portfolio projects first. Fill every [N]; link GitHub repos — GenAI recruiters click them.

PRIOR SOFTWARE TESTING EXPERIENCE

Senior QA Engineer — [Company]

MMM YYYY – MMM YYYY

- Led testing for [domain] applications; [N]+ releases signed off, [N]% defect leakage; API testing and SQL validation.

QA Engineer — [Company]

MMM YYYY – MMM YYYY

- Functional, regression, and UAT testing across [domain] systems; JIRA, Postman, SQL.

📌 GUIDE — DELETE BEFORE SENDING: PRIOR EXPERIENCE: Compressed to 1–2 bullets per role — it proves depth and stability; the GenAI section above is your pitch.

CERTIFICATIONS & CONTINUOUS LEARNING

- GenAI / LLM Evaluation coursework — e.g., DeepLearning.AI 'Evaluating and Debugging Generative AI', 'Red Teaming LLM Applications' [list what you actually completed]
- Python for Testers / Automation certification [if any]
- ISTQB Foundation [year] · ISTQB Certified Tester – AI Testing (CT-AI) [strongly recommended for this transition]

EDUCATION

B.Tech / B.E. in [Branch], [University], [Year]
