

🔑 GUIDE — DELETE BEFORE SENDING: HOW TO USE THIS TEMPLATE (Template A — Hybrid framing). Best when you have 10–20 yrs QA experience and GenAI skills from training/self-projects but no formal GenAI job yet. It is honest, ATS-safe, and recruiter-friendly: it leads with your QA credibility and shows GenAI as a deliberate, evidenced transition. Every amber box like this one is a guide note. Read it, apply it, then delete the box. Search the document for [square brackets] — every bracket is a placeholder you must replace with your real data. Never send a resume containing brackets or amber boxes.

YOUR NAME

Senior QA Engineer | GenAI & LLM Evaluation Testing | RAG • RAGAS • DeepEval • Promptfoo • Python

Hyderabad, India | +91-XXXXXXXXXX | your.email@example.com | linkedin.com/in/yourprofile | github.com/yourhandle

🔑 GUIDE — DELETE BEFORE SENDING: HEADLINE: Keep 'Senior QA Engineer' first (your proven identity), GenAI second (your direction). Mirror 3–4 exact keywords from each job description here — ATS ranks the headline heavily. If the JD says 'AI Quality Engineer', use that exact phrase.

PROFESSIONAL SUMMARY

QA professional with [12]+ years of experience in manual and functional testing across [banking / healthcare / retail] domains, now specializing in Generative AI and LLM application testing. Hands-on with evaluating AI responses for accuracy, relevance, groundedness, and safety using RAGAS, DeepEval, Promptfoo, and LangSmith, including LLM-as-a-Judge and human evaluation techniques. Experienced in designing Golden, Regression, Edge-Case, and Adversarial datasets, performing prompt-injection and jailbreak testing, and automating evaluation workflows in Python integrated into CI/CD. Combines deep test-engineering discipline with modern Responsible AI quality practices.

🔑 GUIDE — DELETE BEFORE SENDING: SUMMARY: 4 sentences, exactly this shape — (1) who you are + years + domain, (2) your GenAI specialization + tools, (3) 2–3 JD responsibilities you can claim, (4) the bridge: old strength + new skill. Replace [12] and the domains. Rule: every tool named here must appear again in Skills AND in a project/experience bullet, or ATS/recruiters treat it as keyword stuffing.

CORE SKILLS

GenAI / AI Testing

GenAI / LLM Testing: LLM Response Evaluation, RAG Testing, Hallucination Detection, Groundedness & Faithfulness Validation, Prompt Validation, Bias & Toxicity Testing

Evaluation Frameworks: RAGAS, DeepEval, Promptfoo, LangSmith, LLM-as-a-Judge, Human Evaluation Rubrics

AI Security Testing: Adversarial Testing, Prompt Injection, Jailbreak Testing, Red Teaming

Datasets & Metrics: Golden / Regression / Edge-Case / Adversarial Datasets; Precision, Recall, F1, Faithfulness, Answer & Context Relevance, Safety Metrics

Programming & Automation: Python (pytest), Prompt Engineering, Evaluation Pipelines in CI/CD (Jenkins / GitHub Actions)

Responsible AI: AI Governance, Compliance Validation, Enterprise AI Quality Standards

Software Testing Foundation

Testing Core: Manual Testing, Functional / Regression / Integration / UAT, Test Planning, Test Case Design, Defect Management, RTM

Tools & Process: JIRA, ALM/QC, Agile/Scrum, SDLC/STLC, API Testing (Postman), SQL

🔑 GUIDE — DELETE BEFORE SENDING: SKILLS: GenAI group deliberately sits ABOVE classic QA — recruiters scan top-down and you are applying for GenAI roles. Delete any tool you cannot discuss for 2 minutes in an interview; one exposed skill damages the nine real ones. Add/remove keywords per job description — this section is your main ATS keyword bank.

GENAI TESTING PROJECTS

RAG Chatbot Evaluation Framework (Hands-on Project)

- Built an automated evaluation pipeline for a RAG-based Q&A chatbot using RAGAS and DeepEval, measuring Faithfulness, Answer Relevance, Context Precision, and Context Recall.
- Designed a 150+ question Golden Dataset with ground-truth answers; created Regression, Edge-Case, and Adversarial subsets for release-gating.

- Implemented LLM-as-a-Judge scoring with calibrated rubrics and validated judge reliability against human evaluation on a sample set.
- Detected and documented hallucination patterns (unsupported claims, fabricated citations) and reported groundedness gaps to prompt/RAG tuning.

Prompt Injection & Jailbreak Test Suite (Hands-on Project)

- Created an adversarial test suite in Promptfoo covering prompt injection, role-play jailbreaks, encoding attacks, and system-prompt leakage scenarios.
- Automated safety regression runs in CI/CD so every prompt or model change is gated on safety and quality thresholds.
- Tracked evaluation runs, traces, and failures in LangSmith for debugging and reporting.

 **GUIDE — DELETE BEFORE SENDING: PROJECTS:** This section is what makes a transition resume credible — it is your GenAI 'experience' until you have a GenAI job. The two projects above are realistic and match your target JD; build them for real (a weekend each with RAGAS/Promptfoo docs + any open LLM API), push code to GitHub, and link the repos here. **Bullet formula:** Action verb + what you tested + tool + metric/outcome. Numbers make it real: dataset size, metrics measured, thresholds set. If a project is from a course, say so honestly in the title — '(Guided Project, Coursera)' — interviewers always ask.

PROFESSIONAL EXPERIENCE

Senior QA Engineer / Test Lead

MMM YYYY – Present

Company Name — Client / Domain (e.g., Banking, Healthcare)

- Led end-to-end testing for [application], owning test strategy, planning, and sign-off for releases used by [N] users.
- Designed and executed [N]+ test cases per release across functional, regression, and integration cycles; sustained [N]% defect leakage or lower.
- Managed a team of [N] testers; drove defect triage with developers, product owners, and business analysts.
- Applying evaluation-first mindset to AI features: validating chatbot/ML outputs for accuracy, relevance, and consistency [keep only if true].

QA Engineer

MMM YYYY – MMM YYYY

Company Name — Client / Domain

- Executed functional, regression, and UAT cycles for [application]; authored test cases from BRDs/user stories.
- Performed API testing with Postman and backend validation with SQL; logged and tracked defects in JIRA to closure.
- Reduced regression cycle time by [N]% through test-suite optimization and risk-based prioritization.

Earlier roles: [Title], [Company] ([YYYY–YYYY]) • [Title], [Company] ([YYYY–YYYY]) — details on request.

 **GUIDE — DELETE BEFORE SENDING: EXPERIENCE:** With 10–20 yrs, give full bullets only for the last 2 roles (~10 yrs); compress everything older into the one-line 'Earlier roles' entry above — this keeps you at 2 pages and avoids age bias. In your recent role, reframe anything AI-adjacent (tested a chatbot? search results? recommendations?) using GenAI-JD vocabulary: accuracy, relevance, consistency. Keep the last bullet ONLY if genuinely true.

Replace every [N] with a real number: team size, test-case counts, defect-leakage %, cycle-time savings. Vague bullets ('responsible for testing') are the #1 reason experienced-tester resumes get rejected.

CERTIFICATIONS & CONTINUOUS LEARNING

- GenAI / LLM Evaluation coursework — e.g., DeepLearning.AI 'Evaluating and Debugging Generative AI', 'Red Teaming LLM Applications' [list what you actually completed]
- Python for Testers / Automation certification [if any]
- ISTQB Foundation / Advanced [year] • ISTQB Certified Tester – AI Testing (CT-AI) [strongly recommended for this transition]

 **GUIDE — DELETE BEFORE SENDING: CERTS:** List only completed items. For this transition the highest-signal items are: ISTQB CT-AI, DeepLearning.AI short courses on LLM evaluation/red-teaming, and any Python certificate. If you have none yet, do 2–3 free short courses this month — an empty transition resume needs this section.

EDUCATION

B.Tech / B.E. in [Branch], [University], [Year]
