

*🔑 GUIDE — DELETE BEFORE SENDING: HOW TO USE THIS TEMPLATE (5-10 yrs, Template A — Hybrid framing). Best when you have 5-10 yrs QA experience and GenAI skills from training/self-projects but no formal GenAI job yet. Mid-career is the sweet spot for this transition: you have credibility but no 'senior manual-only' label — this template leads with QA experience and shows GenAI as your growth direction.*  
*Amber boxes are guide notes: read, apply, delete. Replace every [bracketed placeholder]. Target length: 2 pages maximum, ideally 1.5.*

# YOUR NAME

**QA Engineer | GenAI & LLM Evaluation Testing | RAG • RAGAS • DeepEval • Promptfoo • Python**

Hyderabad, India | +91-XXXXXXXXXX | your.email@example.com | linkedin.com/in/yourprofile |  
github.com/yourhandle

*🔑 GUIDE — DELETE BEFORE SENDING: HEADLINE: 'QA Engineer' or 'Senior QA Engineer' first (match your actual title level), GenAI second. Mirror 3-4 exact keywords from each JD — ATS ranks the headline heavily.*

## PROFESSIONAL SUMMARY

QA Engineer with [7]+ years of experience in functional and regression testing across [banking / healthcare / retail] domains, now specializing in Generative AI and LLM application testing. Hands-on with evaluating AI responses for accuracy, relevance, groundedness, and safety using RAGAS, DeepEval, Promptfoo, and LangSmith, including LLM-as-a-Judge and human evaluation techniques. Experienced in designing Golden, Regression, Edge-Case, and Adversarial datasets, performing prompt-injection and jailbreak testing, and automating evaluation workflows in Python integrated into CI/CD.

*🔑 GUIDE — DELETE BEFORE SENDING: SUMMARY: 3 sentences — (1) who + years + domain, (2) GenAI specialization + tools, (3) JD responsibilities you can claim. At 5-10 yrs you don't need the 'bridge' sentence seniors need; recruiters expect mid-career pivots. Every tool named must reappear in Skills AND a project bullet.*

## CORE SKILLS

### GenAI / AI Testing

**GenAI / LLM Testing:** LLM Response Evaluation, RAG Testing, Hallucination Detection, Groundedness & Faithfulness Validation, Prompt Validation, Bias & Toxicity Testing

**Evaluation Frameworks:** RAGAS, DeepEval, Promptfoo, LangSmith, LLM-as-a-Judge, Human Evaluation Rubrics

**AI Security Testing:** Adversarial Testing, Prompt Injection, Jailbreak Testing, Red Teaming

**Datasets & Metrics:** Golden / Regression / Edge-Case / Adversarial Datasets; Precision, Recall, F1, Faithfulness, Answer & Context Relevance, Safety Metrics

**Programming & Automation:** Python (pytest), Prompt Engineering, Evaluation Pipelines in CI/CD (Jenkins / GitHub Actions)

**Responsible AI:** AI Governance, Compliance Validation, Enterprise AI Quality Standards

### Software Testing Foundation

**Testing Core:** Manual Testing, Functional / Regression / Integration / UAT, Test Planning, Test Case Design, Defect Management, RTM

**Tools & Process:** JIRA, ALM/QC, Agile/Scrum, SDLC/STLC, API Testing (Postman), SQL

*🔑 GUIDE — DELETE BEFORE SENDING: SKILLS: GenAI group sits above classic QA deliberately. Delete any tool you can't discuss for 2 minutes in an interview. At your level, Python competence is the single biggest differentiator — if your Python is weak, prioritize it over adding more eval tools.*

## GENAI TESTING PROJECTS

### RAG Chatbot Evaluation Framework (Hands-on Project)

- Built an automated evaluation pipeline for a RAG-based Q&A chatbot using RAGAS and DeepEval, measuring Faithfulness, Answer Relevance, Context Precision, and Context Recall.
- Designed a 150+ question Golden Dataset with ground-truth answers; created Regression, Edge-Case, and Adversarial subsets for release-gating.
- Implemented LLM-as-a-Judge scoring with calibrated rubrics and validated judge reliability against human evaluation on a sample set.

- Detected and documented hallucination patterns (unsupported claims, fabricated citations) and reported groundedness gaps for prompt/RAG tuning.

### Prompt Injection & Jailbreak Test Suite (Hands-on Project)

- Created an adversarial test suite in Promptfoo covering prompt injection, role-play jailbreaks, encoding attacks, and system-prompt leakage scenarios.
- Automated safety regression runs in CI/CD so every prompt or model change is gated on safety and quality thresholds.
- Tracked evaluation runs, traces, and failures in LangSmith for debugging and reporting.

📌 **GUIDE — DELETE BEFORE SENDING: PROJECTS:** Your GenAI 'experience' until you land a GenAI role. Build these two for real (a weekend each with RAGAS/Promptfoo docs + any LLM API), push to GitHub, link the repos in the titles. Bullet formula: Action verb + what you tested + tool + metric/outcome. Mark course-based projects honestly: '(Guided Project, Coursera)'.

## PROFESSIONAL EXPERIENCE

---

### Senior QA Engineer

MMM YYYY – Present

Company Name — Client / Domain (e.g., Banking, Healthcare)

- Own test strategy, planning, and execution for [application]; sign-off across functional, regression, and integration cycles for [N] releases/year.
- Designed and executed [N]+ test cases per release; sustained [N]% defect leakage or lower; mentored [N] junior testers.
- Performed API testing (Postman) and backend validation (SQL); drove defect triage with developers and product owners.
- Evaluated AI-assisted features ([chatbot/search/recommendations]) for accuracy, relevance, and consistency [keep only if true].

### QA Engineer

MMM YYYY – MMM YYYY

Company Name — Client / Domain

- Executed functional, regression, and UAT cycles for [application]; authored test cases from BRDs/user stories.
- Logged and tracked defects in JIRA to closure; reduced regression cycle time by [N]% via risk-based prioritization.

📌 **GUIDE — DELETE BEFORE SENDING: EXPERIENCE:** At 5–10 yrs show all roles with full bullets — you don't need to compress like 15-yr veterans do. Reframe anything AI-adjacent (chatbot, search, recommendations testing) in GenAI-JD vocabulary: accuracy, relevance, consistency. Replace every [N] with real numbers — vague bullets are the #1 rejection reason.

## CERTIFICATIONS & CONTINUOUS LEARNING

---

- GenAI / LLM Evaluation coursework — e.g., DeepLearning.AI 'Evaluating and Debugging Generative AI', 'Red Teaming LLM Applications' [list what you actually completed]
- Python for Testers / Automation certification [if any]
- ISTQB Foundation [year] · ISTQB Certified Tester – AI Testing (CT-AI) [strongly recommended for this transition]

📌 **GUIDE — DELETE BEFORE SENDING: CERTS:** Only completed items. Highest-signal: ISTQB CT-AI, DeepLearning.AI LLM-evaluation short courses, Python certificates. If empty, complete 2–3 free short courses this month.

## EDUCATION

---

B.Tech / B.E. in [Branch], [University], [Year]
