

 **GUIDE — DELETE BEFORE SENDING: HOW TO USE THIS TEMPLATE** (Template B — GenAI-first framing). Use ONLY if you have real hands-on GenAI testing work — a project at your current job, freelance/POC work, or substantial portfolio projects you can demo. It presents you as a GenAI QA specialist whose superpower is 10+ yrs of testing depth. If an interviewer probing 'tell me about your LLM evaluation work' would make you uncomfortable, use Template A instead. Amber boxes are guidance — delete them all before sending. Replace every [bracketed placeholder].

YOUR NAME

GenAI QA Engineer — LLM Evaluation & AI Quality | RAG • RAGAS • DeepEval • LangSmith • Promptfoo • Python

Hyderabad, India | +91-XXXXXXXXXX | your.email@example.com | linkedin.com/in/yourprofile | github.com/yourhandle

PROFESSIONAL SUMMARY

GenAI Quality Engineer specializing in LLM and RAG application testing, built on [12]+ years of software test engineering. Evaluates AI systems using Human Evaluation, Automated Evaluation, and LLM-as-a-Judge; validates accuracy, relevance, groundedness, consistency, and completeness; and hunts hallucinations, bias, toxicity, and grounding failures. Designs and maintains Golden, Regression, Edge-Case, and Adversarial datasets; measures Precision, Recall, Faithfulness, Context Relevance, and Safety; and automates evaluation workflows in Python wired into CI/CD. Strong advocate of Responsible AI governance and enterprise AI quality standards.

 **GUIDE — DELETE BEFORE SENDING: SUMMARY:** Notice this deliberately mirrors your target JD's exact vocabulary — that is intentional and effective for ATS. Personalize sentence 1 with your years/domain and keep only the claims you can defend with a story in an interview. 'Every line here must survive the question: show me.'

GENAI & AI TESTING SKILLS

GenAI / LLM Testing: LLM Response Evaluation, RAG Testing, Hallucination Detection, Groundedness & Faithfulness Validation, Prompt Validation, Bias & Toxicity Testing

Evaluation Frameworks: RAGAS, DeepEval, Promptfoo, LangSmith, LLM-as-a-Judge, Human Evaluation Rubrics

AI Security Testing: Adversarial Testing, Prompt Injection, Jailbreak Testing, Red Teaming

Datasets & Metrics: Golden / Regression / Edge-Case / Adversarial Datasets; Precision, Recall, F1, Faithfulness, Answer & Context Relevance, Safety Metrics

Programming & Automation: Python (pytest), Prompt Engineering, Evaluation Pipelines in CI/CD (Jenkins / GitHub Actions)

Responsible AI: AI Governance, Compliance Validation, Enterprise AI Quality Standards

Testing Foundation: Test Strategy, Functional & Regression Testing, Defect Management, API Testing, SQL, JIRA, Agile — [12]+ years

 **GUIDE — DELETE BEFORE SENDING: SKILLS:** In GenAI-first framing, classic QA compresses to one line — it is your foundation, not your pitch. Tune the GenAI lines per JD; delete anything you can't demo.

GENAI TESTING EXPERIENCE & PROJECTS

GenAI QA Engineer (AI Quality Initiative) — [Company / Freelance / Independent]MMM YYYY – Present

[One line: what AI product/feature you evaluated — e.g., internal RAG knowledge assistant for support teams]

- Own end-to-end quality for an LLM-powered [chatbot/assistant]: evaluation strategy, dataset design, automated eval runs, and release sign-off against quality and safety thresholds.
- Built RAGAS + DeepEval pipelines measuring Faithfulness, Answer Relevance, Context Precision/Recall; wired into [Jenkins/GitHub Actions] so every prompt or model change is regression-gated.
- Designed Golden ([N] items), Regression, Edge-Case, and Adversarial datasets; ran prompt-injection and jailbreak suites in Promptfoo, closing [N] safety findings before release.
- Implemented LLM-as-a-Judge with calibrated rubrics; validated judge agreement against human evaluation ([N]% agreement) before trusting automated scores.

RAG Chatbot Evaluation Framework (Hands-on Project)

- Built an automated evaluation pipeline for a RAG-based Q&A chatbot using RAGAS and DeepEval, measuring Faithfulness, Answer Relevance, Context Precision, and Context Recall.

- Designed a 150+ question Golden Dataset with ground-truth answers; created Regression, Edge-Case, and Adversarial subsets for release-gating.
- Implemented LLM-as-a-Judge scoring with calibrated rubrics and validated judge reliability against human evaluation on a sample set.
- Detected and documented hallucination patterns (unsupported claims, fabricated citations) and reported groundedness gaps to prompt/RAG tuning.

Prompt Injection & Jailbreak Test Suite (Hands-on Project)

- Created an adversarial test suite in Promptfoo covering prompt injection, role-play jailbreaks, encoding attacks, and system-prompt leakage scenarios.
- Automated safety regression runs in CI/CD so every prompt or model change is gated on safety and quality thresholds.
- Tracked evaluation runs, traces, and failures in LangSmith for debugging and reporting.

 **GUIDE — DELETE BEFORE SENDING: EXPERIENCE/PROJECTS:** The first entry is a frame for real GenAI work you've done — inside your current job (even informally), freelance, or a serious independent build. Title it truthfully: 'AI Quality Initiative' inside your QA role is honest if you actually did it. If you have NO such work, stop — go build the two portfolio projects, or switch to Template A. Fill every [N]. Link GitHub repos. Recruiters for GenAI QA roles click the links.

PRIOR SOFTWARE TESTING EXPERIENCE

Senior QA Engineer / Test Lead — [Company]

MMM YYYY – MMM YYYY

- Led testing for [domain] applications; [N]+ releases signed off, team of [N], [N]% defect leakage.

QA Engineer — [Company]

MMM YYYY – MMM YYYY

- Functional, regression, API, and database testing across [domain] systems; JIRA, Postman, SQL.

Earlier roles ([YYYY–YYYY]) available on request.

 **GUIDE — DELETE BEFORE SENDING: PRIOR EXPERIENCE:** Aggressively compressed — one or two bullets per role. Its job is to prove seniority and stability, not to compete with the GenAI section for attention.

CERTIFICATIONS & CONTINUOUS LEARNING

- GenAI / LLM Evaluation coursework — e.g., DeepLearning.AI 'Evaluating and Debugging Generative AI', 'Red Teaming LLM Applications' [list what you actually completed]
- Python for Testers / Automation certification [if any]
- ISTQB Foundation / Advanced [year] · ISTQB Certified Tester – AI Testing (CT-AI) [strongly recommended for this transition]

EDUCATION

B.Tech / B.E. in [Branch], [University], [Year]
